

Ondřej Úlehla

Fullstack Developer & AI Engineer

ondrejulehla@gmail.com · github.com/ondraulehla · Prague, Czech Republic

I'm a fullstack developer at NetGenium, where over the last five years I've grown into the person who leads how AI gets built into our products and our own workflow. I work across the whole lifecycle – sitting down with clients, analysing their needs, designing the solution, and then shipping it across frontend, backend and infrastructure.

Lately my focus is AI engineering: RAG pipelines over real client implementations, MCP servers, and automating processes that used to eat entire days – from customs clearance for the Czech Post to resolving client tickets, where the AI has the concrete codebase on hand and can find and fix the reported issue itself.

EXPERIENCE

Fullstack Developer & AI Engineer · NetGenium Jan 2021 – Present

Enterprise applications on our low-code platform, client delivery, and leading the integration of AI across the company's products and internal workflow.

- Led the end-to-end integration of AI into NetGenium's systems, from data and retrieval to the tools and interfaces developers and clients use.
- Built RAG pipelines for the LLMs we use with clients, grounding answers in each client's real implementation so the models reason over actual code and data.
- Automated internal processes with AI: generating applications in our NetGenium framework, and near-automatic client-ticket resolution – the AI has the concrete implementation on hand, so it locates the reported problem and fixes it.
- Automated the customs-clearance process for the Czech Post and built/customized their PostShop (postshop.cz) storefront.
- Built internal MCP servers and database-backed MCP servers for clients; currently building the new Hello.cz website together with a partner studio.

TypeScript · JavaScript · C# · SQL · React · Claude API · RAG · MCP

Research Internship (exchange) · TU Wien Feb 2023 – Jun 2023

Research internship in Vienna during an exchange stay at TU Wien.

- International research experience alongside a demanding CS program.

IT Administrator · Health centre Jan 2018 – Dec 2020

IT administration and support during university studies.

EDUCATION

Czech Technical University – FIT Sep 2018 – Jun 2024

Ing. (Master's), Software Engineering

SKILLS

Languages:	TypeScript, JavaScript, C#, C/C++, Java, SQL
Frontend:	React, Vue, Astro, Tailwind CSS, HTML/CSS
AI Engineering:	RAG pipelines, MCP servers, Claude API, Agentic workflows, Prompt engineering
Backend & Data:	Node.js, .NET, PostgreSQL, Oracle, Redis
Infrastructure:	Docker, Kubernetes, Git, CI/CD
Client work:	Requirements analysis, Solution design, Workshops & presentations, Technical writing
Languages:	Czech (Native), English (C1 · TOEFL iBT 101/120), French (Intermediate · B1), German (Basic · A2)
